### DST Operations Supervisor

Founded in 1987, Metrol are global leaders in the innovation, development and operation of wireless down-hole systems, using acoustic, electromagnetic and inductive telemetry.

Metrol's understanding of this technology and its application plays a major part in our success. Our products are already used by energy companies throughout the world during exploration and production, where the data and control provided allows significant advances in efficiency and safety. Metrol's commitment to research and development has ensured that the company stays at the forefront of downhole communications and the successful introduction of a range of new products has resulted in company growth.

We are located in the Kirkhill Industrial Estate in Dyce, but operations are global, and we have offices in Dubai, the United States and other worldwide locations.

With a family business culture, we aim to create and provide a working environment that promotes from within, encourages training and development and allows and trusts individuals to maintain a work-life balance.

#### **Benefits:**

The role comes with a competitive salary and benefits package including:

- Culture that promotes teamwork and empowering individuals to make a difference
- Challenging role with on-the-job training, working as part of an expert team
- 33 days holiday with additional holidays for long service and long service awards
- Company Pension contributions
- Private Healthcare and Life Insurance
- Cycle to work scheme
- EV lease scheme
- Flexible/Hybrid working

#### **The Role:**

As part of our ongoing growth, we are actively recruiting a DST Operations Supervisor to support the offshore operations team.

The successful candidate will supervise all aspects of Metrol's world-wide DST operations controlled by Aberdeen base and provide support for all other bases.

They will have matrix style management reporting lines where day to day work and priorities are set by Operations, while also reporting to the Product Centre to provide resource and expertise as required.

#### **Main Duties:**

- liaise with sales staff on new projects, and invoicing
- attend project & sales meetings with clients
- liaise with clients, technical dept., and Product Centre overseeing/designing DST systems
- collaborate with Operations Supervisors to provide expertise on designing DST systems when required
- assign & supervise field staff in preparation of DST equipment systems, diagrams & procedures

- direct workshop and warehouse staff for DST job preparation and load out
- coordinate personnel and equipment logistics with Operations Supervisor
- liaise with Product Manager to further mature Metrol DST Tools and Services
- identify training requirements for field DST Specialists
- conduct and contribute towards DST training for Field Engineers and DST Specialists
- ensure equipment inventory is fit for workload
- support and encourage all staff members to reach their potentials within the Metrol context
- encourage harmonious relationships between all staff and clients;
- promote safe working practices throughout Metrol
- ensure all operations QA including tool run history is up-to-date
- keep Operations Manager up-to-date on all issues
- promote Metrol and act as an exemplary employee of Metrol at all times

### Required Skills & Experience:

- In depth knowledge of all Metrol DST equipment and systems
- In depth knowledge of drill stem testing operations
- Man-management skills
- Project management skills
- Conversant with Metrol QHSE systems, and general wellsite safety procedures and standards
- IWCF Level 4
- IOSH Managing safely
- Customer selling, negotiations and Presentation skills workshop
- Complete offshore training Matrix

### Location:

Our Main Office is in the Kirkhill Industrial estate in Dyce, Aberdeen, however occasional travel may be required to other Metrol sites or Client locations.
